

# DAPP DISTRIBUTIONS

ECR holders receive token asset distributions in new dApps (decentralized applications) that launch on the Epicenter Ecosystem.

## EMPL - MAY 2021

### EMPL Rebase Token: Epicenter Marketplace Price Level Tracker

Used as a noncorrelated volatility reduction component to balance portfolios.

Rebase token "Epicenter Marketplace Price Level Tracker" used as a noncorrelated volatility reduction component to balance portfolios.

Token: exclusive home Polkadot

*Similar to: AMPL*

## EON - JULY 2021

### EON Liquidity Network

Native currency of EON, a smart contract platform that handles cross-chain and administrative duties for the ecosystem.

EON is a proof of stake protocol using Tendermint consensus.

*Similar to: ATOM*

## EDX - SEPT 2021

### EDEX Decentralized Non-Custodial P2P Exchange

Utility token for EDEX Decentralized Exchange Protocol, used to pay fees.

Token: Ethereum

*Similar to: SRM, VITE*

## ECHO - JAN 2021

### Immutable censorship resistant content distribution network

Echo combines blockchain + tor + torrent technologies to enable censorship resistant, immutable, tamper evident content distribution at scale - torrent protocols are among the only to get faster as usage grows, the inverse of the usual scenario.

Echo assures content creators that their work can never be deplatformed or demonetized. Users store torrent seeds in exchange for tokens, and a directory of these + associated metadata is stored on chain in the EON distributed ledger.

Token: EON

*Similar to: FIL, STEEM, HIVE, IUP*
