

Elastic Multi Protocol Liquidity

International Monetary Fund

Soft-pegged via elastic rebase to:

1 SDR (~\$1.39)

This represents a basket of the world's fiat currencies

WHAT IS IT?

“Hayek Money” refers to a concept put forth by F.A. Hayek wherein the desired macroeconomic result - in this case market price level equilibrium at \$1.39 - is attained through “rebasings” the number of units of currency in each user’s wallet.

HEDGE CURRENCY RISK

- Physical commodities
- Precious metals
- Real estate
- Insurance & derivatives
- Fixed income products

WHAT GIVES IT VALUE?

- EMPL accrues cash flows from fees within the ecosystem
- Transfer fees (Tobin Tax) on EMPL traders

HOW DOES IT WORK?

- Protocol-owned liquidity provided to Convex, Curve etc.
- These income streams fund ongoing buyback & burn events
- The protocol accumulates physical gold
