

## Why is it important for a currency?

When an arbitrary quantity can be created there is nothing to stop those who control the printing from making more.

### UNITED STATES M1

THE SUPPLY OF FEDERAL RESERVE NOTES  
**HAS INCREASED >70% OVER THE PAST YEAR**

Source: Board of Governors of the Federal Reserve System (US)

“A few trillion for my pals,  
\$1200 for you!”

EPIC is the hardest money ever created. There are only 5,760 coins issued daily, a figure guaranteed to decline by 50%, to 2,880 coins in October 2023. This process continues such that by May 2028, daily supply creation declines by 96%, from 5,760 to 210 coins daily. This is hard-coded and can never be changed. Censorship resistant, unconfiscatable, cost effective, energy efficient, fungible P2P electronic cash on an open, public, permissionless, borderless, neutral blockchain is considered by many to be the “Holy Grail of Money”. 21 million coins for 8 billion people. Can you afford not to own one?

**1 BTC \$34k**  
Supply: 18.93m

**1 EPIC \$1.86\***  
Supply: 13.6m  
(as of 01-24-22)

\* Not \$1.86k, but the price of a snack

Same full True Original Bitcoin Nakamoto Consensus, less centralized, less costly, less environmental impact less censorable, less permissioned, less trusting, less unfair. Epic is not the next Bitcoin or a better Bitcoin. It IS Bitcoin, the way it started: fast, mineable by ordinary people with home computers, cheap, uniquely useful.
