

A DEVASTATING FINANCIAL STORM IS BREWING...

THE STORM YOU'RE LIVING THROUGH TODAY...

These might not be happening to you right now, but they can, have and will happen again in the near future.

CASH RESTRICTIONS

Your bank restricts how much cash you can use - see Nigeria in 2022 and Spain in 2021 for example.

NEGATIVE INTEREST RATES

Imagine paying interest to keep your money in the bank - it's already happened in Japan & Europe.

CAPITAL CONTROLS

Regulation designed to control inflows and outflows of money to a country - see Argentina in 2019.

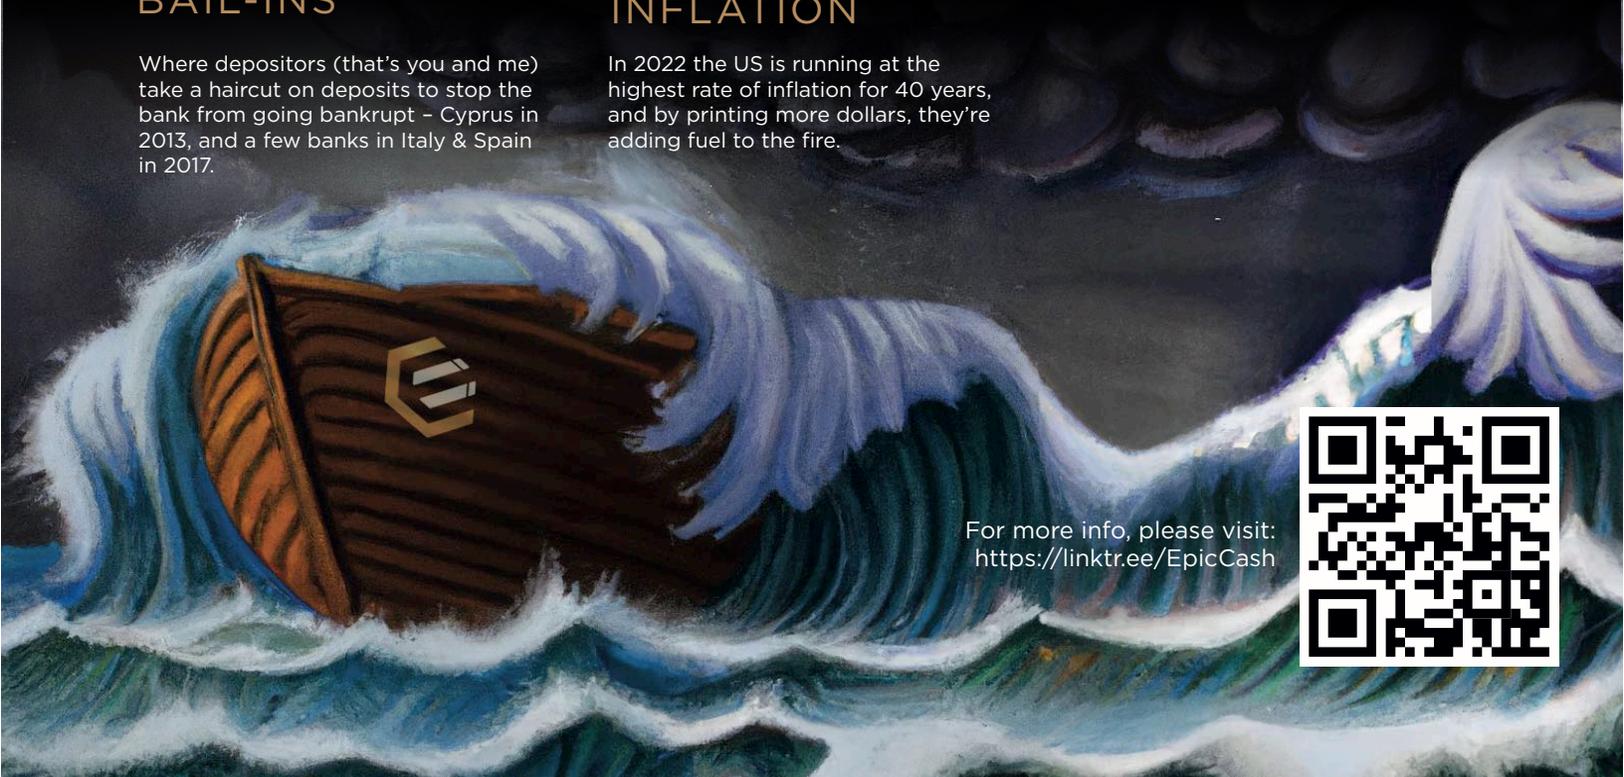

BAIL-INS

Where depositors (that's you and me) take a haircut on deposits to stop the bank from going bankrupt - Cyprus in 2013, and a few banks in Italy & Spain in 2017.

INFLATION

In 2022 the US is running at the highest rate of inflation for 40 years, and by printing more dollars, they're adding fuel to the fire.

THE STORM THAT'S COMING...

CENTRAL BANK DIGITAL CURRENCIES

A dystopian nightmare where governments control your money. All the great features of blockchain technology, but weaponized against you. For example, in China CBDCs are used for mass surveillance to monitor everything you spend. Your money can also expire, so you can never save and you have to spend it! If you thought the fiat banking system was unfair, wait until you get hold of your CBDC!

AN INSOLVENT FEDERAL RESERVE

The Federal Reserve is already running at a loss and possibly headed for insolvency. When do the markets decide enough is enough? What happens if the Fed implodes? What happens to your dollars? What's the impact on the rest of world when the global reserve currency collapses? Nobody knows for sure, but I don't want to be holding dollars when I find out.

WHAT'S THE ANSWER?

You need a safe haven for your money.

Crypto evolved as a solution to this exact problem, but the Bitcoin and Ethereum ecosystems have forgotten their roots and evolved into 'captured' systems, now controlled by the people they were designed to replace. They are definitely not the answer.

You need the ability to pay anyone, anywhere, anytime, any amount, for any reason, privately, so nobody can stop you. 24/7, 365 for under a penny in under a minute – directly from your phone or desktop. You need un-stoppable money. That's what EPIC is.

When the bubble bursts and the system collapses, where do you want your money? In a system where your government can confiscate what it needs to make the books balance? In a crypto system that is transparent and pseudonymous, and relies on trusting third parties to access and spend your crypto and where validation and mining is controlled by the Chinese state?

Or do you want it in a private, anonymous, fast, lightweight, unstoppable system where the mining happens on standard computers anywhere in the world and where a full node will fit on a smart phone? I know where I'm putting mine.

EPIC IS YOUR FINANCIAL ARK
